PART NUMBER 0445L-14A ITEM NAME 445 NM LASER

PRODUCT DATASHEET

DESCRIPTION

445 nm laser diode module is an excellent choice for flow cytometry, fluorescence and biomedical applications. Small footprint, stable power, low power consuption are only a few advantages of this laser. This particular version of 445 nm laser is fiber coupled to a MM fiber.

SPECIFICATIONS

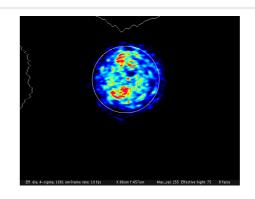

Specifications updated: 28 December 2022

¹ The optical power can be tuned from virtually 0% to 100%. However, other specifications, such as central wavelength, power stability, noise, polarization ratio, beam shape, quality and circularity are not guaranteed at power levels other than factory preset power. Significantly worse power stability is to be expected at very low power levels, e.g. <3% from specified nominal power.

Note: Product specifications are subject to change without prior notice to improve reliability, function or design or otherwise.

² The long term power test is carried out at constant laser body temperature (+/-0.1 °C) using an optical power meter with an input bandwidth of 10 Hz. The actual measurement rate has a period of about 20 seconds to 1 minute.

³The long term power test is carried out at constant laser body temperature (+/-0.1 °C) using an optical power meter with an input bandwidth of 10 Hz. The actual measurement rate has a period of about 20 seconds to 1 minute.

 $^{^4}$ Noise level is measured with a fast photodiode connected to an oscilloscope. The overall system bandwidth is from 2 kHz to 20 MHz.

⁵Break-out-boxes AM-C8 and AM-C3 can be used for conversion of UART communication to either USB or RS232.

⁶TTL digital modulation up to 10 MHz.

⁷ Excluding control interface pins and an output window/fiber assembly.

⁸ This function can be enabled in hardware only if the fast modulation option is disabled. The customer must specify this before ordering the laser.

⁹ Whichever occurs first. The laser has an integrated operational hours counter.
