PART NUMBER 0783L-24A ITEM NAME 783 NM SLM LASER

# PRODUCT DATASHEET

#### **DESCRIPTION**

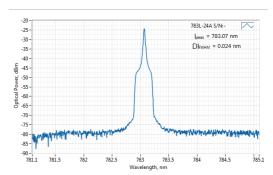

783 nm SLM laser is designed for Shifted Excitation Raman Difference Spectroscopy (SERDS). This laser is used together with a 785 nm as a matched pair of identical excitation sources having central wavelength peaks separated by 2 nm apart. This separation is quite universal and suitable for most spectrometers. It is recommended to combine the two laser beams into a single optical path using a polarizer and then apply the laser lens clean-up filter. Another approach is to use Volume Bragg Grating based filters for coupling the beams together and cleaning-up the lines at the same time.

## **SPECIFICATIONS**

### Specifications updated: 14 November 2023

## TYPICAL SPECTRUM

Typical spectrum of 0783 nm diode laser. Measured with 20 pm resolution.

## TYPICAL NEAR FIELD

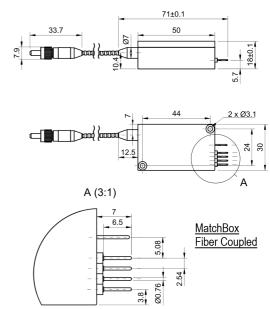

Max. power consumption, W	0.4	2	10
Warranty, months (op. hrs)	-	14 (10000) <sup>9</sup>	-
RoHS	-	Yes	-
CE compliance	-	- General Product Safety Directive (GPSD) 2001/95/EC - (EMC) Directive 2004/108/EC	-
Laser safety class	-	3B	-
OEM lasers are not compliant with	-	IEC60825- 1:2014 (compliant using additional accessories)	-
Country of origin	-	Lithuania	-

<sup>&</sup>lt;sup>2</sup> The output power of SLM lasers shall not be tuned and SLM performance is not guaranteed at power ratings other than factory preset. However, the power setting capability is not disabled. External attenuators are recommended instead.

Note: Product specifications are subject to change without prior notice to improve reliability, function or design or otherwise.

### **DRAWING**

<sup>&</sup>lt;sup>3</sup>The long term power test is carried out at constant laser body temperature (+/-0.1 °C) using an optical power meter with an input bandwidth of 10 Hz. The actual measurement rate has a period of about 20 seconds to 1 minute.

<sup>&</sup>lt;sup>4</sup>The long term power test is carried out at constant laser body temperature (+/-0.1 °C) using an optical power meter with an input bandwidth of 10 Hz. The actual measurement rate has a period of about 20 seconds to 1 minute.

 $<sup>^5</sup>$  Noise level is measured with a fast photodiode connected to an oscilloscope. The overall system bandwidth is from 2 kHz to 20 MHz.

 $<sup>^{\</sup>rm 6}$  Break-out-boxes AM-C8 and AM-C3 can be used for conversion of UART communication to either USB or RS232.

 $<sup>^7\,\</sup>mathrm{SLM}$  lasers shall not be modulated - use external modulators instead.

<sup>&</sup>lt;sup>8</sup> Excluding control interface pins and an output window/fiber assembly.

 $<sup>^{\</sup>rm 9}\,\rm Whichever$  occurs first. The laser has an integrated operational hours counter.
