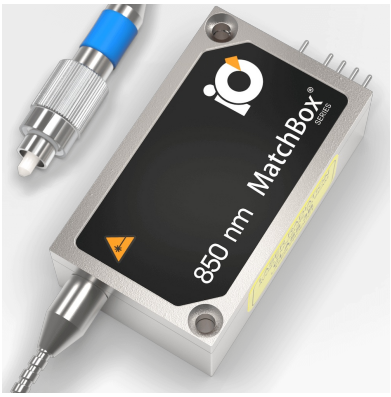
PART NUMBER 0850L-15A
ITEM NAME 850 NM LASER

PRODUCT DATASHEET



DESCRIPTION

850 nm infrared lasers of the MatchBox series. These lasers are used as compact and cost-effective laser sources for metrology and spectroscopy applications.

By default, this type of laser is built with FC/PC connector, but other fiber terminations are available upon request. Details about non-standard connector and the fiber used with it should be discussed with the Integrated Optics sales team.

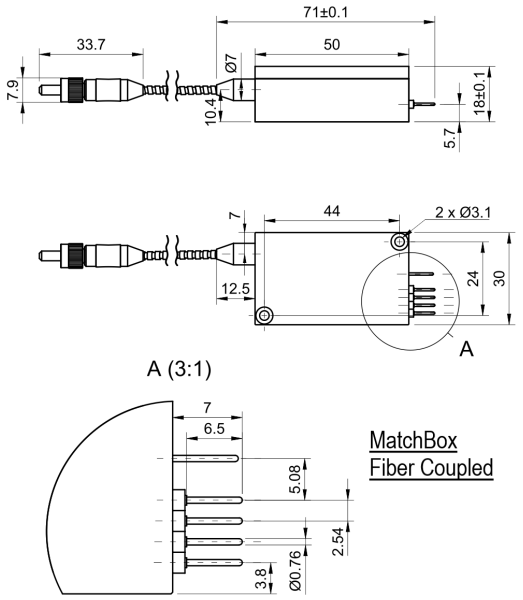
DRAWING



[1] The optical power can be tuned from virtually 0% to 100%. However, other specifications, such as central wavelength, power stability, noise, polarization ratio, beam shape, quality and circularity are not guaranteed at power levels other than factory preset power. Significantly worse power stability is to be expected at very low power levels, e.g. <3% from specified nominal power.
[2] The long term power test is carried out at constant laser body temperature (+/-0.1 °C) using an optical power meter with an input bandwidth of 10 Hz. The actual measurement rate has a period of about 20 seconds to 1 minute.
[3] The long term power test is carried out at constant laser body temperature (+/-0.1 °C) using an optical power meter with an input bandwidth of 10 Hz. The actual measurement rate has a period of about 20 seconds to 1 minute.
[4] Noise level is measured with a fast photodiode connected to an oscilloscope. The overall system bandwidth is from 2 kHz to 20 MHz.
[5] With possible error of up to ±5°.
[6] Break-out-boxes AM-C8 and AM-C3 can be used for conversion of UART communication to either USB or RS232.
[7] TTL digital modulation up to 10 MHz.
[8] Excluding control interface pins and an output window/fiber assembly.
[9] This function can be enabled in hardware only if the fast modulation option is disabled. The customer must specify this before ordering the laser.
[10] Whichever occurs first. The laser has an integrated operational hours counter.
